Hiring Team, Qube Research & Technologies

Dear Hiring Team,

I am writing to apply for the 2027 Internship or Graduate, Software Engineer and Quantitative Developer role. I am completing an MSc in Data Science at The University of Hong Kong (graduating March 2027) and hold a BEng in Data Science and Big Data Technology from Nanjing University of Science and Technology. I am eligible to work in Hong Kong under IANG and do not require sponsorship.

Since April 2026 I have been an AI Research Intern at Amber Group in Hong Kong, building LLM agent systems in Python for a digital-asset financial firm. Working close to trading and research teams showed me how much leverage well-engineered, reliable software creates when it sits near investment decisions. Earlier, at NOVOAI and Himalaya, I built full-stack LLM applications and data pipelines that ran in production.

My research background is rigorous and quantitative: I am first author of papers at AAAI 2026 and ECAI 2024 and a co-author at ICCV 2025 and IEEE T-IFS, covering multimodal learning, robustness and trustworthy AI. I am comfortable with Python, PyTorch and data-intensive systems, and I enjoy turning research ideas into dependable, well-tested code. QRT's research-driven, technology-first approach to systematic investing is exactly the environment where I want to grow as a software engineer.

Thank you for your time and consideration. I would welcome the chance to discuss how I can contribute.

Sincerely,
Xiang Gu
